No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                             The invention describes an isolated nucleic acid molecule comprising a sequence that is at least 95% identical to a polynucleotide encoding novel human G-protein coupled receptor HGPRBMYS. The nucleic acid molecule, polypeptide and antibody are useful in diagnosing, preventing, treating or ameliorating medical conditions where GPCR is directly or treating or ameliorating medical conditions where GPCR is directly or architis, astuma, ALDS, graft-versus-host disease, psoriasis or systemic lupus erythematosus), reproductive disorders (e.g. varicocele or lupus erythematosus), reproductive disorders (e.g. varicocele or chitis), neural disorders (e.g. Alzheimer's disease, Parkinson's orchitis), neure heart failure), pulmonary disorders, endocrine hypertension or acute heart failure), pulmonary disorders (e.g. disorders (e.g. obesity, diabetes or anorexia), bone disorders (e.g. osteoporosis), pain or cancer. The polynucleotide may also be used in chromosome identification, in identifying organisms from minute chromosome identification, and identification or as molecular weight markers. This sequence encodes a novel human G-protein coupled receptor HOPRBMY25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          896

                                                                                                                                                                      The invention relates to nucleic acids encoding human olfactory receptors, OR, (a g protein-coupled receptor, GPCR). The OR's specifically recognise molecules, odourants, that elicit specific olfactory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds for compounds that are involved in olfactory sensation. Modulators of their activity are useful for pharmacological and genetic modulation of olfactory signalling pathways. Therefore, they can be used in the food, pharmaceutical and cosmetic industries to customise and
                                                                                                                                                                                                                                                                                                                         fragrances. The present sequence encodes a human olfactory receptor of the invention

Seceptor (GPCR) genes (ABZ42870-ABZ43216) and/or GPCR proteins (ABP95596-ABP95942) by extracting open-reading frames containing 6-8 transmembrane domains with 250-1000 amino acid residues to give a gene homologous with strown GPCR gene. The receptor proteins and encoded genes are useful for studying in vivo signal transduction mechanism and identifying targets Human, GPCR, G protein coupled receptor; signal transduction; olfactory; drug development; gustatory; taste; fragrance; gene; ds. The invention relates to a method of representing sensory perception of one or more odourants. The method comprises: (a) providing a conformation of an olfactory receptors or ligand binding domains (LBD) of these receptors; (b) measuring values X1 to Xn representative of these receptors; (b) measuring values X1 to Xn representative of conformation of the LBD of at least one of the n olfactory conformation of the LBD of at least one of the n olfactory copporates, (ii) activating at least one of the n olfactory receptors with the one of more odourants; and (c) generating a colfactory receptors with the one or more odourants; and (c) generating a colfactory receptors with the one or more odourants; and (c) generating a colfactory receptors with the one or more odourants; and (c) generating a colfactory receptors with the one or more odourants; and (c) generating a colfactory receptor perception from the values X1 to Xn. The copperation of the sensory perception of odourants is useful for the design and formulation of odour and taste compositions. ABK3799-ABK37754 and ABK37921 represent human olfactory G-coupled receptor coding confounces and related PCR primers of the invention

GPCR sequences can have neuroprotective, nootropic, anti-HIV, antiasthmatic, antiateriosclerotic, cytostatic, immunomodulator, antiinflammatory, antidiabetic, anorectic, heemostatic, antibactic, antiulcer, antiulcer, antiallergic, hepatotropic and antiparkinsonian activities, and can be used in vaccines and gene therapy. GPCR proteins, uncleic acid molecules, and antibodies from the present invention can be used for manufacturing a medicament for treating or preventing a GPCR-associated disorder or syndrome related to cell signal processing and metabolic pathway modulation, such as cardiomyopathy, atheroscierosis, diabetes, cancer, obesity, infections (bacterial, fungal, protozoal or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated human G-protein coupled receptor X (GPCRX) polypeptide, useful for treating or preventing GPCRX-associated disorders e.g. diabetes, atherosclerosis, cancer or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 8; Page 88; 354pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                     361
                ulcers, allergies, cirrhosis, glomerulonephritis, stroke, systemic lupus erythematosus, or haematopoietic disorders. Anti-GPCR antibodies can be used diagnostically to monitor protein levels in tissues as part of a clinical testing procedure such as in determining the efficacy of a given treatment regimen. ADQ88418 to ADQ8859 represent PCR primers and probes for the human GPCRs of the present invention
                                                                                                                                                                                                                                                                                                              181

A ABO88354 to ABO88417 represent human G protein coupled receptor (GPCR) CDNA sequences, and ABP51560 to ABP51624 represent human GPCR proteins converted to the present invention. GPCR sequences can have neuroprotective, converted anti-HIV, antiasthmatic, antiatreriosclerotic, cytostatic, moutropic, anti-HIV, antiasthmatic, antiateriosclerotic, cytostatic, contibacterial, fungicide, protozoal, virucide, nephrotropic, osteopathic, antializer, and can be used in vaccines and gene therapy. GPCR proteins, concluding a medicament for treating or preventing a GPCR cused for manufacturing a medicament for treating or preventing a GPCR cused for manufacturing a medicament for treating or preventing a GPCR cused for manufacturing a medicament for cell signal processing and especies, cancer, obesity, infections (bacterial, fungal processing and ciabetes, cancer, obesity, infections (bacterial, fungal protozoal or viral), HIV, asthma, Parkinson's disease, osteoporosis, Crohn's disease, carchinistis, stroke, systemic lupus crythemarosus, or haematopoletic disorders. Anti-GPCR antibodies can be used diagnostically to monitor protein levels in tissues as part of a crythematoment regimen. ABQ88418 to ABQ88639 represent PCR primers and probes xxx Claim 8; Page 88; 354pp; English.

Sequence 998 BP: 190 A:

us-10-081-775-2.rng

```
The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a receptors are useful for determining the interaction pattern of a differences in the olfactory faculties of different individuals

The invention relates to a novel human G-coupled receptor (I). (I) and its corresponding polynucleotides are useful for diagnosing, treating or preventing cell proliferative diseases (e.g. lymphoma, leukaemia, breast disease, multiple sclerosis of mental retardation), cardiovascular diseases, multiple sclerosis or amental retardation), cardiovascular failure), gastrointestinal disorders (e.g. dysphagia, indigestion or gastritis), autoimmune/inflammatory disorders (e.g. AIDS, Crohn's disease or systemic lupus erythematosus) or metabolic disorders (e.g. diabetes or parvovirus). ABK16615-ABK16637 represent novel human G-coupled receptor

The invention relates to olfactory and Pheromone G-protein coupled creeptor (GPCR) or a protein 95% identical to the GPCR, a specific active receptor (GPCR) or a protein 95% identical to the GPCR, a specific active correction and its encoding polynuclectide. Also included are an agonist, comparising the polynuclectide, a cell transformed by the vector, a noncompositing the polynuclectide, a cell transformed by the vector, a noncompositing the receptor and screening (detection and possibly, recovering) of compounds which are known or not known to be agonist, antagonists or compounds which are known or not known to be agonist, antagonists or inhibitors of natural compounds to the GPCR. The receptor-derived compination or substitution of an existing taste and/or a improvement, elimination or substitution of an existing taste and/or a fragrance of (or in) the food and/or commettion products. They can also be consect in the preparation of medicament in the treatment and/or prevention of a mammalian disorder, such as cell migration, sterility, psychotic and chaptession, depression, for promoting axonal growth, nerve cell connection and nerve regeneration for modulating male and female connection and nerve regeneration for modulating male and female. 9 Novel pheromone G-protein coupled receptor and receptor-derived agonists, ancagonists or inhibitors useful in food or cosmetic products or in the treatment or prevention of neurological disorders such as anxiety and Human; ds; gene; olfactory and pheromone G protein coupled receptor; GPCR; tranquilizer; antidepressant; neuroleptic; endocrine; anabolic; anorectic; taste; fragrance; food additive; cometic; cell migration; eterility; psychotic disorder; neurological disorder; anxiety; schizophrenia; manic depression; depression; axonal growth; menstrual cycle; appetite sexual motivation; sexual attraction; prevention or the treatment by stimulation of several mammalian behaviours, such as stimulation or suppression of appetite, sexual serious sation, agraesion and for promoting or suppressing chemical communication between organisms. The present sequence is a human DNA encoding an olfactory and pheromone GPCR BP; 182 A; 276 C; 217 G; 291 T; 0 U; 0 Other; 966 317 1 0 0 Length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel human olfactory G protein-coupled receptors (GPCR) and their coding sequences (ABZ77872-ABZ77986 and ABR01571-ABR01685). The GPCRs and coding sequences are useful for diagnosing or treating a disease or condition associated with GPCR, e.g. infections, obesity, diabetes, hypertension, malnutrition, Parkinson's disease, Alzheimer's disease, Korsakoff's psychosis, anxiety, rheumatoid arthitis, chronic obstructive pulmonary disease, osteoporosis, asthma, myocardial infarction, schizophrenia, or osteoarthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New olfactory G protein-coupled receptor gene nucleic acid and polypeptide, useful for diagnosing or treating a disease or condition associated with GPCR, e.g. obesity, diabetes, hypertension, malnutrition or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               39

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LeuAlaAlaSerValSerThrValProLysLeuLeuAlaIlePheTrpCysGlyAlaGly 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel polymucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polymucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel human olfactory G protein-coupled receptors (GPCR) and their coding sequences (ABZ77872-ABZ77986 and ABR01571-ABR01685). The GPCRs and coding sequences are useful for diagnosing or treating a disease or condition associated with GPCR, e.g. infections, obesity, diabetes, hypertension, malnutrition, Parkinson's disease, Alzheimer's disease, Korsakoff's psychosis, anxiety, rheumatoid arthritis, chronic obstructive pulmonary disease, osteoporosis, asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New olfactory G protein-coupled receptor gene nucleic acid and by Orypeptide, useful for diagnosing or treating a disease or condition associated with GPCR, e.g. obesity, diabetes, hypertension, malnutrition or Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ccrrcr---rrrcrcregradgearrccaegrrradageaaagccagcacrddarrgca 93

The present sequence is one of a number of isolated polynuclectides which encode polypeptides involved in olfactory sensation. The polynuclectides can be used in screening for olfactory agonists and antagonists. The identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which receptors are useful for determining the interaction pattern of a scent composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals
                                                                                                                                                                                                                                      New polynucleotides which encode polypeptides involved in olfactory sensation for identifying olfactory agonists and antagonists.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to nucleic acids encoding human olfactory receptors, OR, (a G protein-coupled receptor, GPCR). The OR's specifically recognise molecules, odourants, that elicit specific olfactory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds for compounds that are involved in olfactory sensation. Modulators of their activity are useful for pharmacological and genetic modulation of olfactory signalling pathways. Therefore, they can be used in the food,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; olfactory receptor; G protein-coupled receptor; GPCR; odourant; ss; food additive; cosmetic; fragrance; pharmaceutical additive.

                                    The invention describes an isolated nucleic acid molecule comprising a sequence that is at least 95% identical to a polynucleotide encoding novel human G-protein coupled receptor HGPRBMY25. The nucleic acid molecule, polypeptide and antibody are useful in diagnosing, preventing, treating or ameliorating medical conditions where GPCR is directly or indirectly, involved, such as immune or inflammatory diseases (e.g. arthritis, asthma, AIDS, graft-versus-host disease, psoriasis or systemic lupus erythematosus), reproductive disorders (e.g. varicocale or orchitis), neural disorders (e.g. Alzheimer's disease, pstkinson's disease, depression or schizophrenia), cardiovascular disorders (e.g. hypertension or acute heart failure), pulmonary disorders (e.g. hypertension or acute heart failure), pulmonary disorders, endocrine disorders (e.g. obseity, diabetes or anorexia), hone

The invention relates to a method for screening G protein-coupled receptor (GPCR) genes (ABZ42870-ABZ4316) and/or GPCR proteins (ABP95596-ABP95942) by extracting open-reading frames containing 6-8 transmembrane domains with 250-1000 amino acid residues to give a gene homologous with a known GPCR gene. The receptor proteins and encoded genes are useful for studying in vivo signal transduction mechanism and identifying targets for drug development e.g. based on olfactory and gustatory receptors in ligands as bitter taste inhibitors, taste enhancers and fragrance improvers. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; GPCR; G protein coupled receptor; signal transduction; olfactory; drug development; gustatory; taste; fragrance; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Argrecageacretragecacacaragaarereeraareacacraargargrigaeeerrer

The invention relates to a method of representing sensory perception of one or more odourants. The method comprises: (a) providing a representative class of n olfactory receptors or ligand binding domains (EDD) of these receptors; (b) measuring values XI to Xn representative of at least one activity of one or more odourants selected from: (i) binding one or more odourants to the LBD of at least one of the n olfactory receptors with the one or more odourants; and (iii) blocking at least one of the n olfactory receptors with the one or more odourants; and (c) generating a configuration of sensory perception from the values XI to Xn. The representation of the sensory perception of odourants is useful for the design and formulation of odour and taste compositions. ABK37499-ABK37754 and ABK37918-ABK37921 represent human olfactory G-coupled receptor coding sequences and related PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                              Representing sensory perception of one or more odorants for the identification and design of tastes and odors comprises providing representative group of n olfactory receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example; Page 115; 182pp; English

ABQ88354 to ABQ88417 represent human G protein coupled receptor (GPCR) CC CDNA sequences, and ABP51660 to ABP31624 represent human GPCR proteins from the present invention. GPCR sequences can have neuroprotective, concertopic, anti-HIV, antiatehmatic, antiarteriosclerotic, cytostatic, immunomodulator, antialinear, antializer, antializer, hepatotropic, antipartines, and can be used in vaccines and gene therapy. GPCR proteins, activities, and can be used in vaccines and gene therapy. GPCR proteins, cardiant, antializer, and antibodies from the present invention can be nucleic acid molecules, and antibodies from the present invention can be nucleic acid molecules, and antibodies from the present invention can be used for manufacturing a medicament for treating or preventing a GPCR sesociated disorder or syndrome related to cell signal processing and metabolic pathway modulation, such as cardiomyopathy, atherosclerosis, diabetes, cancer, obesity, infections (bacterial, fungal, protozoal or viral), HIV, asthma, Parkinson's disease, osteoporosis, crohn's disease, ulcers allergies, cirrhosis, glomerulonephritis, stroke, systemic lupus cused diagnostically to monitor protein levels in tissues as part of a used diagnostically to monitor protein levels in tissues as part of a used diagnostically to monitor protein levels in tissues as part of a customent regimen. ABQ88418 to ABQ88639 represent PCR primers and probes treatment regimen. ABQ88418 to ABQ88639 represent PCR primers and probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

Contropic, anti-HIV, antiasted to ABP51624 represent human GPCR proteins confirm the present invention. GPCR agedences can have neuroprotective, from the present invention. GPCR agedences can have neuroprotective, contropic, anti-HIV, antiasthmatic, antiarteriosclerotic, cytostatic, immunomodulator, antialflammatory, antiatidabetic, anorectic, haemostatic, antibocterial, fungicide, proteozoal, virucide, nephrotropic, osteopathic, cardiant, antiulcer, antiallergic, hepatotropic and antiparkinsonian activities, and can be used in vaccines and gene therapy. GPCR proteins, nucleic acid molecules, and antibodies from the present invention can be used for manufacturing a medicament for treating or preventing a GPCR casociated disorder or syndrome related to cell signal processing and metabolic pathway modulation, such as cardiomyopathy, atherosclerosis, cancer, obesity, infections (bacterial, fungal, proteozoal or viral), HIV, asthma, Parkinson's disease, osteoporosis, Crohn's disease, cylicars, allergiae, cirthosis, glomerulomephritis, stroke, systemic lupus crythematosus, or haematopoietic disorders. Anti-GPCR antibodies can be collinical testing procedure such as in determining the efficacy of a given of the human of the hu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the

can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in the detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingarprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals
                                                                                                                                                                                                                                                                                       144

receptor

or viral infections (e.g. infection by herpesvirus or s). ABK16615-ABK16637 represent novel human G-coupled

parvovirus) obesity),

```
The invention relates to a novel human G-coupled receptor (I). (I) and its corresponding polynucleotides are useful for diagnosing, treating or preventing cell proliferative diseases (e.g. lymphoma, leukaemia, breast cancer or cirrhosis), neurological disorders (e.g. stroke, Alzheimer's disease, multiple sclerosis or mental retardation), cardiovascular diseases (e.g. atherosclerosis, angina pectoris or congestive heart failure), gastrointestinal disorders (e.g. dysphagia, indigestion or gastritis), autoimmune/inflammacory disorders (e.g. AlDS, Crohn's disease or systemic lupus erythematosus) or metabolic disorders (e.g. diabetes or

The invention relates to olfactory and Pheromone G-protein coupled receptor (GPCR) or a protein 95% identical to the GPCR, a specific active portion and its encoding polymucleotide. Also included are an agonist, antagonist or inhibitor of the GPCR or the polymucleotide, a vector. Comprising the polymucleotide, a cell transformed by the vector, a non-human mammal comprising a partial or total deletion of the polymucleotide encoding the receptor and screening (detection and possibly, recovering) of compounds which are known or not known to be agonist, antagonists or inhibitors of natural compounds to the GPCR. The receptor-derived agonists, antagonists or inhibitors of natural compounds to the GPCR. The receptor-derived agonists, inhibitors or compounds are used as an improvement, elimination or substitution of an existing taste and/or a fragrance of (or in) the food and/or cosmetic products. They can also be used in the preparation of medicament in the treatment and/or prevention of a mammalian disorders, such as cell migration, sterility, psychotic and neurological disorders, including anxiety, schizophrenia, manic connection and nerve regeneration for modulating male and female endocrine functions, hormone production and the menstrual cycle, for the prevention or the treatment by stimulation of several mammalian.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel pheromone G-protein coupled receptor and receptor-derived agonists, antagonists or inhibitors useful in food or cosmetic products or in the treatment or prevention of neurological disorders such as anxiety and schizophrenia.
                                                                                                                                                                                                                                          Human DNA for olfactory and pheromone G protein-coupled receptor #212

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New olfactory G protein-coupled receptor gene nucleic acid and polypeptide, useful for diagnosing or treating a disease or condition associated with GPCR, e.g. obesity, diabetes, hypertension, malnutrition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel human olfactory G protein-coupled receptors (GPCR) and their coding sequences (ABZ77872-ABZ77996 and ABR01571-ABR01685). The GPCRs and coding sequences are useful for diagnosing or treating a disease or condition associated with GPCR, e.g. infections, obesity, diabetes, hypertension, malnutrition, Parkinson's disease, Alzheimer's disease, Korsakoff's psychosis, anxiety, rheumatoid arthritis, chronic obstructive pulmonary disease, osteoporosis, asthma, myocardial infarction, schizophrenia, or osteoparthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCCACTGAACCAGTCTTGCACAAGCCTGTGTACCTTTTTCTGTGCATGCTCTCAACCATC

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      88

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CTGTGAGCACATGGCTGTGAAGCTGGCCTGTGGAGACACCAGGCCTAACCGTGTGTA 623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CATGGAATCTCCTCATCACACTGATGTTGACCCTTCTGTCTTCTTCCTCCTGGGCATCCC
